Beyond OER

- communication in one's own language
- continuous upgrade of teachers as well as the resources
- created by conversation and interaction
- collaboration
- need resources that work
- need a variety of resources
- need a critical mass to sustain

this media has a message!

- let us talk
- let us collaborate
- let us network
- let us share
- let us make it together
- let us assess together
- let us be transparent
-

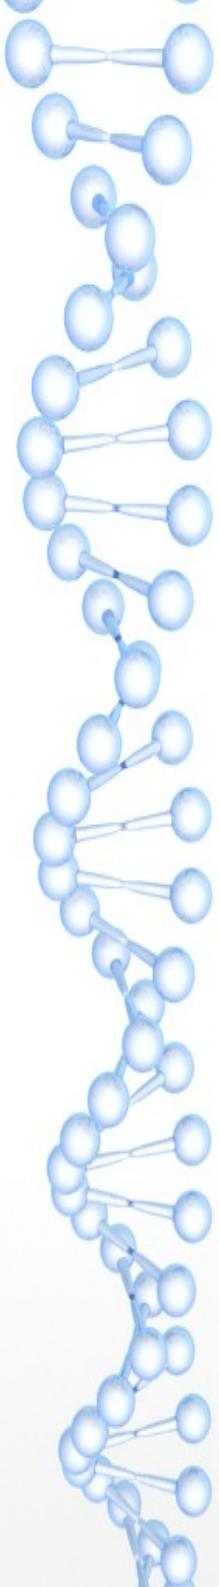

imagine a OER and Internet without
individuals actors

- who talk
- who make
- who interpret
- who reinterpret
- who make sense

what this new media is not?

- for consumers, but for producers and makers
- a publishing medium
- it is a making medium
- it is a connecting medium
- therefore we need to redo our resources that this medium supports
- we may re-publish our old resources, but that is not enough
- we need to redo them to suit this new medium.
- we need to re-purpose our resources
-

- engaging community
- connecting resources
- networking community
- organizing knowledge
- dialogue and conversation

thank you
